

PARASHARI DESK

Video Explainer

Production Script

Aman voice • synchronized cursor choreography • review draft

PRODUCTION OBJECTIVE

Create a calm, credible guided tour for astrologers: demonstrate how the desk moves from chart context to timing evidence, while every pointer movement, click, zoom and spoken explanation remains synchronized.

TARGET RUNTIME	FRAME	VOICE	DELIVERABLES
8:00	1920 × 1080	Aman • original	MP4 + SRT

Approval gates

- Approve the spoken script and the order of features.
- Approve terminology, captions and pronunciation pickups.
- Record the interface only after the first two gates are signed off.

CURRENT STATUS

Script and choreography only. No final interface recording or final narration mix is created at this stage.

Production language

The film should feel like an expert showing another expert a well-organized instrument—not like a rapid feature advertisement.

ELEMENT	RULE
Cursor	Move in 450–700 ms with a gentle ease. Pause 250–350 ms over the destination. Show a restrained 350 ms click ripple.
Synchronization	The pointer leads the spoken label by about 250 ms. The click lands on the action word. Explain the result only after the state change finishes.
Zoom	Use controlled 108–118% push-ins only when text or evidence matters. Return to 100% before changing sections.
Scroll	Use one deliberate scroll gesture at a time. Let the content settle. Never scrub or hunt for a control on screen.
Captions	Two lines maximum, sentence case, exact product spelling. Keep captions clear of bottom navigation and evidence cards.
Sound	Aman voice remains foreground. Optional music must be subtle, instrumental and at least 18 dB below narration.

Recording setup

- Desktop: 1600 × 900 browser viewport captured into a 1920 × 1080 master; browser zoom 100%. Use the prepared test native, not private customer data.
- Initial as-of date: 09 August 2026. Keep the same native and as-of context throughout, except where the script deliberately demonstrates date synchronization.
- Mobile inserts: 390 × 844 viewport. Record separately and place within a clean device frame; do not simulate mobile by squeezing the desktop capture.
- Hide developer tools, bookmarks, browser extensions, notification badges and personal account details.

Terminology and voice handling

APPROVED VOICE RULE

Use the original Aman voice and its original tone and pace. Keep visible spellings exact: Parashari, Vimshottari, Shadbala, Ashtakavarga, Nakshatra and Dasha. If a term is mispronounced, make a clean word-level pickup and review it; do not switch voices or insert distorted phonetic spellings.

SCENE 01 / Open with the predictive workflow

TIME 00:00–00:22 · 22 seconds

GOAL Establish the desk as one connected workspace for chart context, timing and evidence.

STARTING STATE Branded title card, then desktop overview loaded with the test native.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Fade up title: 'Parashari Desk — from chart to timing evidence.' No cursor.	Parashari Desk
00:05	Cross-dissolve to the full desk at 100%. Cursor rests outside the workspace.	brings the chart, dashas, transits and event timing into one connected workspace.
00:13	Slow 106% push-in centred on the charts and activation dock.	This tour shows how an astrologer can move from context to a specific timing window—and inspect the evidence behind it.
EXACT NARRATION Parashari Desk brings the chart, dashas, transits and event timing into one connected workspace. This tour shows how an astrologer can move from context to a specific timing window—and inspect the evidence behind it.		

Editor notes

- Keep the opening restrained: no feature montage and no fast cursor movement.
- On-screen subtitle: 'Chart context · timing windows · inspectable evidence'.

VISUAL REFERENCE Appendix · 01-desktop-overview.png

SCENE 02 / Orient the viewer

TIME 00:22–00:55 · 33 seconds

GOAL Explain the fixed header, primary modes and desk layout before interacting.

STARTING STATE Desktop overview at 100%; Activation mode open.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Cursor glides across desk title and native identity, without clicking.	The header keeps the native and working context visible.
00:08	Trace across Chart, Dasha, Act and More; pause over Act.	The main modes separate chart study, dasha browsing, activations and classical tools.
00:18	Cursor draws a gentle Z-path: chart row, dasha browser, right evidence dock.	On desktop, charts stay in view while the lower dasha browser and the right-side timing workspace remain available together.
EXACT NARRATION The header keeps the native and working context visible. The main modes separate chart study, dasha browsing, activations and classical tools. On desktop, charts stay in view while the lower dasha browser and the right-side timing workspace remain available together.		

Editor notes

- Use a faint rose focus halo following the cursor path; do not darken the rest of the interface.
- Do not click a main mode yet—the purpose here is spatial orientation.

SCENE 03 / Set the as-of moment

TIME 00:55–01:32 · 37 seconds

GOAL Demonstrate that a single as-of moment synchronizes time-dependent views.

STARTING STATE Header visible; as-of date remains 09 August 2026.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Cursor moves to the date field and pauses. Add 112% crop on the navigator.	The as-of navigator is the temporal anchor for the desk.
00:09	Move across year, month, week, day and hour controls; do not click each control.	It can move by year, month, week, day or hour, while Now returns to the present moment.
00:20	Click the next-day control once. Hold until charts and timing state finish updating.	When the date changes, the transit chart and time-dependent activation evidence update together.
00:30	Click previous-day once to restore 09 August. Pull back to 100%.	The natal chart remains fixed, so comparison stays clear.
EXACT NARRATION The as-of navigator is the temporal anchor for the desk. It can move by year, month, week, day or hour, while Now returns to the present moment. When the date changes, the transit chart and time-dependent activation evidence update together. The natal chart remains fixed, so comparison stays clear.		

Editor notes

- Wait for all loading states to settle before the final sentence.
- Caption the control names only once; do not duplicate labels already visible in the UI.

SCENE 04 / Read charts and activated houses

TIME 01:32–02:20 · 48 seconds

GOAL Show the chart workspace, divisional access, insight interaction and activation colouring.

STARTING STATE Chart mode; D1 and Transit visible with black chart boundaries.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Click Chart. Sweep across D1, D9, D10 and Transit selectors.	Chart mode gives direct access to the natal chart, divisional charts and transit context.
00:12	Click D9, hold 1.5 seconds, then click D10. Return to D1.	Divisional charts open in the same workspace, so comparison does not break the reading flow.
00:24	Hover an activated D1 house. Click it once to open the insight dock.	In D1 and Transit, highlighted houses show which areas are active at the selected moment.
00:36	Move to the matching Transit house, then the insight content. No further click.	A house can be opened for its supporting factors, while the two charts preserve the natal and moving-sky relationship.
EXACT NARRATION Chart mode gives direct access to the natal chart, divisional charts and transit context. Divisional charts open in the same workspace, so comparison does not break the reading flow. In D1 and Transit, highlighted houses show which areas are active at the selected moment. A house can be opened for its supporting factors, while the two charts preserve the natal and moving-sky relationship.		

Editor notes

- Use a small, persistent legend for activated-house colours before the first hover.
- Do not imply that colour alone predicts an event; call it an activity signal.

SCENE 05 / Browse dashas without losing context

TIME 02:20–03:02 · 42 seconds

GOAL Show the four dasha systems, five timing levels and date synchronization.

STARTING STATE Dasha mode, Vimshottari selected, five timing columns visible.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Click Dasha. Cursor pauses over Vim, Yog, Kal and Cha tabs.	The Dasha Browser places four timing systems in one consistent view.
00:10	Trace the five columns from Maha through Prana; no click.	Within a system, five levels—from Mahadasha to Prana—remain visible at the same time.
00:20	Click one future Pratyantar row. Wait for selection and date update.	Selecting a period moves the as-of moment to that interval and updates the linked chart and activation context.
00:33	Use the breadcrumb to move one level back; keep cursor still after click.	Breadcrumbs make it easy to step outward without losing the chosen sequence.
EXACT NARRATION The Dasha Browser places four timing systems in one consistent view. Within a system, five levels—from Mahadasha to Prana—remain visible at the same time. Selecting a period moves the as-of moment to that interval and updates the linked chart and activation context. Breadcrumbs make it easy to step outward without losing the chosen sequence.		

Editor notes

- On-screen labels may abbreviate the systems exactly as the product does; captions should use their full names when introduced.
- Keep the selected row centred after the update.

SCENE 06 / Use the Activation Timeline

TIME 03:02–03:50 · 48 seconds

GOAL Explain current/next windows, confidence states and the expanded timing detail.

STARTING STATE Act mode, Timeline selected, legend collapsed to one line.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Click Act, then Timeline. Cursor points across Strong, Active, Period and Quiet.	The Activation Timeline organizes the selected period into readable states.
00:11	Click ‘What do these mean?’, pause one second, then collapse it.	The compact legend expands only when its definitions are needed.
00:21	Click the first Next window. The detail panel expands to use the full available height.	Selecting a window opens its timing detail, activated houses and supporting evidence.
00:34	Move over the ‘Set as-of’ action but do not click yet; then return to the window heading.	This is where a broad period becomes a specific, inspectable timing window.
EXACT NARRATION The Activation Timeline organizes the selected period into readable states: Strong, Active, Period and Quiet. The compact legend expands only when its definitions are needed. Selecting a window opens its timing detail, activated houses and supporting evidence. This is where a broad period becomes a specific, inspectable timing window.		

Editor notes

- The expanded panel must visibly fill the dock; avoid any empty lower half.
- Let the viewer read the date range for at least 1.5 seconds.

VISUAL REFERENCE Appendix · 02-activation-timeline.png

SCENE 07 / Search for a Job Change window

TIME 03:50–04:42 · 52 seconds

GOAL Demonstrate event-specific search, year selection, result ranking and Full View.

STARTING STATE Act mode; Focus tab available; Job change is the default life event.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Click Focus. Pause over Life event and Year selectors.	Focus turns the activation engine into an event-specific search.
00:10	Open Life event; show Job change and Health, then select Job change.	Choose a life event and a year. Job Change evaluates career, transition, dasha and independent timing evidence together.
00:24	Select 2026, optionally leave developing windows off, click Find windows.	Find windows returns qualified periods rather than labelling every activated house as the event.
00:36	Hover the leading result; click Full view. Hold on the modal title and result count.	Full View gives the search room to breathe and keeps the evidence readable.
EXACT NARRATION Focus turns the activation engine into an event-specific search. Choose a life event and a year. Job Change evaluates career, transition, dasha and independent timing evidence together. Find windows returns qualified periods rather than labelling every activated house as the event. Full View gives the search room to breathe and keeps the evidence readable.		

Editor notes

- Do not show the Timeline, Map or Double Transit tabs inside Full View.
- Keep the Find windows button compact in the recording; avoid an oversized primary block.

VISUAL REFERENCE Appendix · 03-focus-event-search.png

SCENE 08 / Inspect the full calculation

TIME 04:42–05:32 · 50 seconds

GOAL Build trust by revealing the scored reasoning in plain language.

STARTING STATE Focus Full View open with the leading Job Change result visible.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Click 'Show full calculations'. Push in to 114% on the calculation header.	Every qualified window can reveal a human-readable calculation trace.
00:10	Slow vertical scroll through Career anchor, Transition signal and Dasha relevance.	The trace explains what each test means, whether it passed, and which houses and dasha lords supplied the connection.
00:25	Continue through independent timing, outcome support and D10 confirmation.	Independent transit timing, gains support and D10 confirmation refine the case without hiding the underlying evidence.
00:40	Pause on exact contact and scoring summary; return to 108%.	The score is therefore reviewable: the astrologer can agree, disagree or investigate the factors directly.
EXACT NARRATION Every qualified window can reveal a human-readable calculation trace. The trace explains what each test means, whether it passed, and which houses and dasha lords supplied the connection. Independent transit timing, gains support and D10 confirmation refine the case without hiding the underlying evidence. The score is therefore reviewable: the astrologer can agree, disagree or investigate the factors directly.		

Editor notes

- Use slow, constant scrolling—about 180 pixels per second—and pause at every scored section.
- Hide 'Set as-of' inside Full View because the underlying desk change is not visible there.
- Never show raw JSON.

VISUAL REFERENCE Appendix · 04-focus-calculation-trace.png

SCENE 09 / Demonstrate Health as an expandable life area

TIME 05:32–05:58 · 26 seconds

GOAL Show that Focus supports another event area without overclaiming medical outcomes.

STARTING STATE Close Full View; Focus remains open in the desk.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Open Life event and choose Health. Keep Year at 2026.	The same framework also supports Health timing.
00:09	Click Find windows. Pause on the explanatory subtitle and leading result.	Here the result is a period of stronger health-related attention—not a diagnosis or a guaranteed medical event.
00:19	Hover ‘Show calculations’ without opening it; no zoom.	Its evidence remains inspectable in the same format.
EXACT NARRATION The same framework also supports Health timing. Here the result is a period of stronger health-related attention—not a diagnosis or a guaranteed medical event. Its evidence remains inspectable in the same format.		

Editor notes

- Display a brief on-screen note: ‘Astrological timing evidence; not medical advice.’
- Do not narrate a health prediction for the test native.

SCENE 10 / Find exact Double Transit periods

TIME 05:58–06:40 · 42 seconds

GOAL Show range selection, exact windows, filters and synchronization to the desk.

STARTING STATE Act mode; Double Transit tab selected.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Click Double Transit. Cursor pauses over From year and Through year dropdowns.	Double Transit searches for periods when Jupiter and Saturn activate the same natal house.
00:11	Open the year dropdowns briefly, then click Calculate exact windows.	Choose a range and calculate exact ingress boundaries rather than relying on approximate monthly positions.
00:23	Switch Future, filter to a life area, and open one result card.	Results can be filtered by contact type and life area, with the house, contact mode and interpretation visible on each card.
00:34	Click the card's Set as-of action. Hold on the updated header date.	Selecting a card moves the desk to that period for chart, transit and dasha inspection.
EXACT NARRATION Double Transit searches for periods when Jupiter and Saturn activate the same natal house. Choose a range and calculate exact ingress boundaries rather than relying on approximate monthly positions. Results can be filtered by contact type and life area, with the house, contact mode and interpretation visible on each card. Selecting a card moves the desk to that period for chart, transit and dasha inspection.		

Editor notes

- Let the calculation finish before moving the cursor into the results.
- Do not claim that a double transit guarantees the displayed result; describe it as a timing condition.

VISUAL REFERENCE Appendix · 05-double-transit.png

SCENE 11 / Open strength and classical tools

TIME 06:40–07:14 • 34 seconds

GOAL Introduce Shadbala, Ashtakavarga, dignity and Chara Karakas without a long detour.

STARTING STATE More mode available; desk returned to 100% zoom.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Click More. Move through Dignity, Shadbala, Ashtakavarga and Chara Karakas.	More brings the supporting classical tools into the same visual language.
00:10	Click Shadbala. Pause on strength summary and readable table hierarchy.	Shadbala presents strength measures in a structured, professional view.
00:20	Close it; open Ashtakavarga as a screen. Move across Matrix, SAV, BAV and Predictions, then use Back.	Ashtakavarga opens as a dedicated screen with Matrix, SAV, BAV and Predictions, plus Birth, Transit and Compare controls.
EXACT NARRATION More brings the supporting classical tools into the same visual language. Shadbala presents strength measures in a structured, professional view. Ashtakavarga opens as a dedicated screen with Matrix, SAV, BAV and Predictions, plus Birth, Transit and Compare controls. Dignity and Chara Karakas remain close at hand when the reading needs them.		

Editor notes

- Pronunciation check: Shadbala and Ashtakavarga require a word-level review before final mix.
- Show the Ashtakavarga back button unobstructed below the app header.

SCENE 12 / Show the mobile desk

TIME 07:14-07:45 · 31 seconds

GOAL Demonstrate that mobile uses focused, continuous bottom tab rows rather than shrinking desktop.

STARTING STATE Cut to 390 × 844 mobile capture on Chart mode.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Show Chart with full-width chart and horizontal divisional tabs at the bottom.	On mobile, the desk becomes a focused browser rather than a compressed desktop layout.
00:09	Swipe the divisional tab row; select D9. Tap Dasha and show its bottom system tabs.	Horizontally scrollable chart and dasha tabs keep every option reachable without crowding the header.
00:19	Tap Act, then More. Show readable cards and bottom sub-tabs; one smooth page scroll.	Activation and More tools use the same continuous bottom-tab pattern, with readable type and touch-sized controls.
EXACT NARRATION On mobile, the desk becomes a focused browser rather than a compressed desktop layout. Horizontally scrollable chart and dasha tabs keep every option reachable without crowding the header. Activation and More tools use the same continuous bottom-tab pattern, with readable type and touch-sized controls.		

Editor notes

- Show a visible finger-drag indicator only during the first horizontal swipe.
- Do not trap the recording inside a nested list scroll; the page must move naturally when dragging on a card.

VISUAL REFERENCE Appendix · 09-mobile-chart.png

SCENE 13 / Close on an auditable reading method

TIME 07:45–08:00 • 15 seconds

GOAL Summarize the product value without promising deterministic outcomes.

STARTING STATE Return to desktop overview; clean state at 100%.

Synchronized cue sheet

RELATIVE TIME	SCREEN / CURSOR / EDIT	AMAN NARRATION CUE
00:00	Three restrained highlights: charts, dasha browser, timing evidence.	Parashari Desk connects natal context, dasha permission and transit timing.
00:08	Fade interface into branded end card. Cursor disappears before fade.	It helps the astrologer identify meaningful windows—and see why each one qualified.
EXACT NARRATION Parashari Desk connects natal context, dasha permission and transit timing. It helps the astrologer identify meaningful windows—and see why each one qualified.		

Editor notes

- End card: 'Parashari Desk • timing evidence you can inspect'. Keep on screen for two seconds after narration.
- Optional footer: 'Astrological analysis is interpretive and does not guarantee events.'

Visual reference board • desktop

Use these frames for composition and control location. Capture the live interface for the film; do not animate the still images themselves.

Overall desk • Scenes 1-2

Activation Timeline • Scene 6

Focus search • Scene 7

Visual reference board • desktop continued

Calculation trace • Scene 8

Double Transit • Scene 10

Shadbala • Scene 11

Visual reference board • mobile

Record the mobile views as native responsive screens. Bottom navigation stays unobstructed and every horizontal tab row must visibly respond to touch.

Voice, pronunciation and caption sheet

This sheet is the required preflight for the approved Aman voice. Display text and captions always use the product spelling; pronunciation fixes are handled as clean pickups.

TERM	ON-SCREEN MEANING	VOICE REVIEW
Parashari Desk	Product name; use this exact visible spelling.	Listen for a clear middle 'sha' and final 'ree'.
Vimshottari	Dasha system.	Review once in isolation and once in the Scene 5 sentence.
Shadbala	Sixfold planetary strength.	Must not sound like 'Shadbolu'. Record a pickup if needed.
Ashtakavarga	Point-based transit framework.	Must not end as 'vargu'. Record a pickup if needed.
Nakshatra	Lunar mansion.	Keep all consonants clear; do not over-slow the sentence.
Dasha	Planetary period.	Use one consistent pronunciation throughout.
Mahadasha	Major dasha period.	Keep natural rhythm; avoid splitting it into two unnatural words.
Pratyantar	Sub-period level.	Test before recording Scene 5.
Chara Karakas	Jaimini significators.	Review the full phrase as spoken in Scene 11.
PICKUP WORKFLOW Generate a short Aman pronunciation strip for the flagged terms. Approve it before the full read. If a term fails inside a sentence, replace only that sentence or word with a matched Aman pickup, then crossfade and loudness-match it. Do not use another voice as a patch.		

Caption rules

- Export a separate UTF-8 SRT and also prepare a review copy with burned-in captions.
- Keep product terminology exactly as shown in the UI; do not spell captions phonetically.
- Maximum two lines and approximately 42 characters per line. Break at phrases, never inside a term.
- Use white text on a 78% dark neutral plate; maintain at least 5% safe margin from all frame edges.

Final recording and review checklist

Before capture

- ☐ Approved Aman pronunciation strip is signed off.
- ☐ Test native contains no private customer data.
- ☐ Desktop and mobile viewports match the production setup.
- ☐ All intended screens load without warnings, skeletons or clipped controls.

Picture and interaction

- ☐ Pointer leads the spoken control label by about 250 ms.
- ☐ Click lands on the spoken action word within ± 150 ms.
- ☐ Every state change finishes before narration explains its result.
- ☐ No aimless cursor travel, nested-scroll trap, tooltip obstruction or hidden back button.
- ☐ Chart boundaries, evidence text and mobile controls remain readable at 1080p.

Narration and terminology

- ☐ Aman voice is the original approved voice, tone and pace.
- ☐ Parashari, Vimshottari, Shadbala, Ashtakavarga and Nakshatra are reviewed in context.
- ☐ No clipped breaths, abrupt word replacements or audible changes in room tone.
- ☐ The script describes timing evidence, not guaranteed events or medical diagnosis.

Delivery

- ☐ Master: H.264 MP4, 1920 × 1080, 30 fps, high-bitrate web delivery.
- ☐ Audio: AAC 48 kHz; narration integrated around -16 LUFS, true peak below -1 dBTP.
- ☐ Captions: reviewed SRT plus burned-in review export.
- ☐ Final watch completed once with sound and once muted for visual clarity.

REVIEW DECISION

Approve or annotate this document first. After approval, record a 20–30 second synchronization proof—one cursor move, one click, one state change and one Sanskrit term—before producing the complete eight-minute film.
